TRIAL SET-UP

CONCLUSION

RESULTS

- CROP: Potato
- VARIETY: Bellarosa
- DATE: 2020
- LOCATION: Cerna, Croatia
- EXECUTED BY: Horticentar
- APPLICATION: Foliar
- DEMONSTRATION TRIAL: B5

Potato

Control	Treated with P4P 4-Good and -30% P_2O_5
Untreated	First application (9L/Ha) - two weeks after start of regrowth after ridging
Untreated	Second application (9L/Ha) - 15 days later

We had same yield even with 30% less P_2O_5 . P4P 4-Good product gives surely a better plant performance with less P_2O_5 applied. This clearly shows an enhanced nutrient use efficiency with plants treated with P4P 4-Good.

YIELD CONSERVATION DESPITE 30% REDUCTION OF P_2O_5 UNITS PER HECATER
