TRIAL INFORMATION

Plants for Plants Life Project | This project is co-funded by the European Union's LIFE Programme under Grant Agreement LIFE18 ENV/NL/000043.

Project partner in Plants for Plants®.

- CROP: Potato
- VARIETY: Innovator
- DATE: 2020
- LOCATION: Lelystad, The Netherlands
- EXECUTED BY: Van Iperen B.V.
- APPLICATION: Foliar
- DEMONSTRATION TRIAL: B5

TRIAL SET-UP

| Control | Treated with P4P 4-Vita |
|-----------|---|
| Untreated | First application (6L/Ha) - 2 weeks after start of regrowth after ridging |
| Untreated | Second application (6L/Ha) - 15 days later |
| Untreated | Third application (6L/Ha) - 15 days later |

CONCLUSION

In this trial, control yield was 8.4% higher than P4P 4-Vita treated modality. We consider this a negative result so far.

RESULTS

DECREASED TOTAL YIELD | -8.4%
